WHY ARE MOVEMENTS CHALLENGING?

What are their friction points?

	XMR	B of Portugal	Global VISA
Daily Transactions	~30,000	~8.5 million	~515 million

30k XMR Transactions The same transactions!

transactions

That's a lot more!

0.0058% Why is this?

wny po we want io po Better?

Should Monero remain a niche tool used out of necessity?

Should Monero and its philosophies be the global standard?

44

Both answers benefit from decreased friction points! It's a win for everyone.

MONERO!

What are Monero's friction points?

Technical Friction Points

TECHNICAL FRICTION POINTS

10 Blocks Lock

Prevents users from spending outputs until they are 10 blocks old

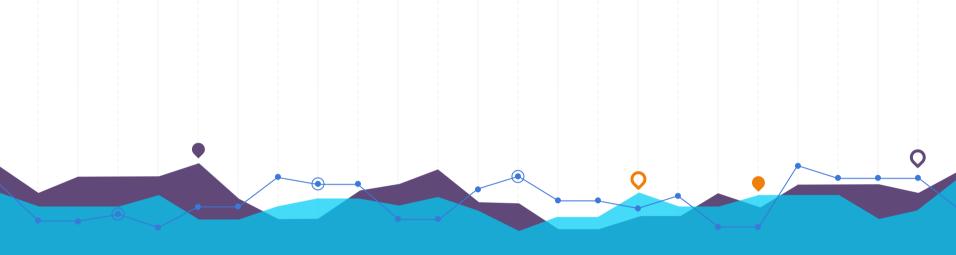

2 Minute Block Time

Transaction will wait for the next block to be mined, will take around 2 minutes to be mined into that new block.

Etc.

There may be many more proposed technical improvements to make

Usage Friction Points

USAGE FRICTION POINTS

Intuitive UI/UX

How simple is it to use Monero day-to-day between exchanges, wallets, and other users?

⋆ Obtaining XMR

How can users obtain XMR? Can they do it privately? Is it intuitive? Is it safe? Is it universal to all people?

* Complexity

How complex is the concept of Monero as a currency?

Societal Friction Points 3

POINTS

Desire for Use-Case

Privacy & financial control is a neglected human right that isn't globally appreciated.

Regulation & Policies

Are people directly or indirectly prevented from obtaining Monero?

Taxes? Policies?

Knowledge

Are people educated in how to use the tool, its shortcomings, why they should use it (or not) over other projects, misinformation, etc.

Image

While Monero's criminal usage validates its core use-case, it may discourage new users from getting involved.

Low Bandwidth

Not everyone has the time & energy to justify diving into new things.

Adoption

Seller adoption, community adoption, worldwide adoption. Growth will likely be exponential.

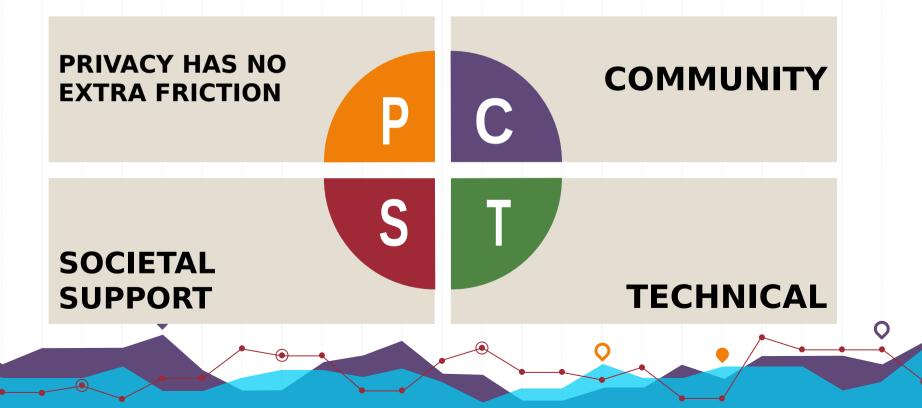

Minimal Friction Points

(or what Monero already does well)

MINIMAL FRICTION POINTS

CORE TAKEAWAYS

- We've only made progress, and progress will continue to move in a positive direction. (Especially as things crack down)
- Reducing friction includes, but goes well beyond technical improvements.
- Being a part of Monero communities, going to conferences like these, developing wallets, exchanges, educating people, etc. are all directly or indirectly reducing Monero friction points. Anyone can support the movement by just using Monero!
- Self-evaluate where you can (and already) help. Every profession, every hobby, can be designed to support the movement.

Any questions?
